

Lab on Classpath

- Use all the same java files from prior labs (Product, Book, Software...)
- Move *ProductApp.java* to some other directory outside of main directory.
- Use `-cp` or `-classpath` options within `javac` and `java` commands.(instead of setting the `classpath` variable in the environment.
- Use `-d` option to place the class files separately from source files.
 - Class files should be placed in

`C:\SSSIHL\javasource\myproject\classes`

E.g.: Suppose I have 'main' directory under `c:\SSSIHL\javasource` path and `ProductApp.java` is in `c:\SSSIHL\javasource\myproject`

```
javac -cp <path> ProductApp.java
```

```
java -cp <path> ProductApp
```

```
javac -cp <path> -d <path> ProductApp.java
```
