

## Lab using Arrays for Products

- Use all the program modules from last session (Product, Book, Software, ProductDB and ProductApp).
- Modify ProductApp to do the following:
  - Use an array to store the created Products.
  - Array size should be 10.
  - Only valid Products should be held in the array (no nulls).
  - Inquire the user to continue after each product code input.
  - Once the input is 'n', print all the products stored in the array.
